

AFTERCARE SERVICE

REPAIR, MAINTENANCE & ALTERATIONS

What does SAS's Aftercare service offer?

- Our Aftercare service facilitates clients such as yourself to extend the life or adapt the usage of existing ceiling installations.
- The versatility of our product enables the tenant to restructure or expand the existing space that they occupy. It also provides the option to integrate and maintain new technology and building services as required.
- Our ceiling tiles can be manufactured with specified apertures allowing for the installation of any mechanical or electrical service. Some of these services can be installed during the manufacturing process, hence reducing on-site installation time.
- The Aftercare team is available to offer specialist technical advice. For example, upgrades may involve increasing the acoustic performance of an office space and we can offer expert guidance relating to this.
- We can also manufacture product to renew/make good dilapidations at the end of a lease period.
- We are available to supply replacement materials that are damaged throughout the life of the ceiling; this may involve extensive renewal or be as minor as a single tile or component.

What is the process?

- We have access to a comprehensive database of current and past projects which allows us to refer to the original plans, drawings and specifications of your SAS ceiling.
- The SAS Aftercare team is available to carry out site visits which will ensure that the details and specification are correct before you place an order.
- With 50 years' experience, SAS can then liaise with a nominated contractor who will ensure the ceiling is fitted in accordance with AIS standards.
